N2NetSecurity, Inc. is "into" providing the best network security consulting and training to our clients. We focus on our client's requirements and strive to help them reach the security summit. Today, we seem to be faced with ever changing threats and ever changing technologies to counter those threats. Instead of chasing the technologies, we get to the root of the problem. From the operating system to the application to the network to the border device, we can assist in securing your network from the bottom up. With decades of IT and security experience, we can save you time and money. We have assembled a talented and professional team with authors from several best selling books. With experience gained at organizations like Bridgestone-Firestone Retail & Commercial, the IRS, and the US Department of Defense, we will tailor a solution to your problems and help you achieve your goals.

Our Leadership – N2NetSecurity, Inc. was founded by Allen Harper, co-author of Gray Hat Hacking: the Ethical Hacker's Handbook. A retired Marine Officer with experience working for the Defense Information Systems Agency (DISA), Allen has taught penetration testing for the US Navy, worked as a Security Analyst for the Internal Revenue Service, instructed Fortune 50 security teams and provided mentorship to thousands of the world's leading information security engineers.

Chris Blask is a seasoned security technology professional with 20 years experience in engineering and marketing information technologies from network appliances to Critical Infrastructure Protection. He is currently on faculty at the Institute for Applied Network Security and Vice President of Business Development at N2NetSecurity, Inc. Formerly, Chris invented the BorderWare Firewall Server in 1992 and later co-founded Protego Networks (now the Cisco MARS SIM appliances).

Our team members have co-authored the following books:

We look forward to serving you.
