

# Free Gap Assessment

In this economy, companies have to make tough choices about IT resources. At the same time, regulatory compliance requirements and associated liabilities are on the rise. To meet this challenge, N2NetSecurity, Inc. has developed a free gap assessment to assist companies in identifying information security gaps and developing a sensible plan to improve the information security posture of the company.

Our employees have decades of experience assisting both private and public sector organizations reach the security summit. With clients ranging from Bridgestone to the Department of Defense, we have the ability to find the issues and help you resolve them before the hackers find them.

The tools and techniques we use are derived from industry best practices and based on a Unified Compliance Framework. This innovative approach allows us to quickly get to the root of the problem, fix it right the first time, and save you time and money.

We do not believe in chasing technologies or regulatory compliance standards. Instead we believe in building solid and comprehensive security programs that can weather any attack and stand up to present and future regulatory audits.

We see information security as a business enabler that if done correctly will lead to effective risk management and governance. We understand the value of your company assets and reputation and will work with you to protect them, as our own.

As part of the free gap assessment, we will spend a day with you and get to know your business processes, systems, and assets. We will ask you a specially designed set of questions that will allow us to quickly assess your current security capability. We will then perform an analysis of our findings and present you a comprehensive report that includes the findings, the impact, and the recommendations for improvement.

We will work hard to earn your business. We look forward to serving your company!
